

Supplementary Data

Table 1. Definition of HRCT findings especially detailed for: 1) those cases with mild radiological abnormalities, 2) honeycombing quantification.

Honeycombing	Cystic air spaces Several milli- meters to 1 cm diameter with thick clearly defined walls located mainly in subpleural areas
Ground-glass	Increased lung attenuation (as mist) that allows to view the underlying vessels through it.
Reticular thickening	Irregular intralobular crisscrossed lines Randomly arranged and separated by a few millimeters.
Distortion of the lung architecture	Abnormal displacement of bronchi, interlobar fissures and interlobular septa.
