Material suplementario

Conocer el impacto de la carga genética de riesgo coronario mejora el control de la presión arterial de los pacientes hipertensos
**SUPPLEMENTARY MATERIAL**

Table of the supplementary material.

Ambulatory Blood Pressure Values at Baseline and Changes at the End Study

| 24 h                 | Baseline                 | 140.0 (138.03 to 51.07) | 139.62 (130.92 to 48.32) | .866  
|                      | Change                    | -16.31 (-26.03 to -6.59) | -14.52 (-23.5 to -5.54) | .442  
| Daytime              | Baseline                 | 145.1 (156.3 to 133.9) | 145.5 (154.5 to 136.5) | .882  
|                      | Change                    | -18.43 (-28.72 to -8.14) | -15.67 (-25.96 to -5.38) | .290  
| Nighttime            | Baseline                 | 127.3 (140.3 to 114.3) | 126.7 (139.1 to 114.3) | .846  
|                      | Change                    | -12.15 (-23.92 to -0.38) | -11.58 (-22.44 to 1.02) | .676  
| **Diastolic**        |                         |               |  
| 24 h                 | Baseline                 | 88.84 (96.14 to 81.54) | 87.41 (94.51 to 80.31) | .425  
|                      | Change                    | -10.96 (-18.88 to -3.04) | -8.50 (-15.62 to 1.38) | .118  
| Daytime              | Baseline                 | 93.4 (100.5 to 86.3) | 92.3 (99.4 to 85.2) | .552  
|                      | Change                    | -11.93 (-18.53 to -5.33) | -9.11 (-17.0 to -1.21) | .123  
| Nighttime            | Baseline                 | 78.3 (87.5 to 61.1) | 76.4 (83.3 to 69.5) | .347  
|                      | Change                    | -8.28 (-16.3 to -0.26) | -7.88 (-15.29 to 0.47) | .645  

Data are expressed as mean (95% confidence interval). Changes for which the 95% confidence interval does not include 0 are significantly different from the baseline. *P value for comparisons among groups with 1-way ANOVA.
