

Supplementary material

Determinants and Prognostic Impact of Heart Failure and Left

Ventricular Ejection Fraction in Acute Coronary Syndrome Settings

**Figure of the supplementary material.** Kaplan-Meier curves for time free of all-cause mortality according to LVEF categories during the first year of follow-up in the entire cohort (A), patients without HF (B) and patients with HF (C) during hospitalization. ACS, acute coronary syndrome; HF, heart failure; LVEF, left ventricular ejection fraction.
